

BEWIN FELIX R A

Full Stack Developer & Agentic AI Engineer

Available for Relocation Globally

Tamil Nadu, India · Phone: +91 7598393250 · Email: biwinfelix@gmail.com
Portfolio: bewinfelix.netlify.app · LinkedIn: linkedin.com/in/bewin-felix · GitHub: github.com/Bewin007

PROFESSIONAL SUMMARY

Specialist Programmer at Infosys with production experience architecting scalable web applications, interactive enterprise dashboards, and modern agentic AI infrastructures. Proven track record building modular analytics modules in React.js, automated operational reporting pipelines, and low-latency model serving systems utilizing vLLM and Triton. Multi-time National Grand Finale Finalist in premier competitions including the Smart India Hackathon and KAVACH. Prepared to deploy high-availability, full-stack digital solutions across international engineering teams.

CORE TECHNICAL COMPETENCIES

Languages:	Python (Advanced), TypeScript, JavaScript (ES6+), SQL, HTML5, Modern CSS, Tailwind CSS
Full Stack & Backend:	React.js, Node.js, Express.js, Django, Django REST Framework, FastAPI, PostgreSQL, MongoDB, RESTful APIs
Agentic AI & Serving:	LangGraph, LangChain, Advanced RAG, vLLM, Triton Inference Server, Open WebUI, Deterministic Guardrails, Prompt Engineering
DevOps & Telemetry:	Docker Containerization, Linux Shell/Bash, Nginx, Graylog Telemetry, Grafana Dashboards, Git/GitHub, Postman

PROFESSIONAL EXPERIENCE

Specialist Programmer August 2025 – Present
Infosys Pune, India

- Contributed to the enterprise **TPD Portal**, developing responsive dashboard views and reusable modular UI components in React.js.
- Engineered interactive data visualization modules (time-series charts, metric trends, and status indicators) to represent high-volume platform records.
- Implemented automated report generation features, enabling business users to export formatted operational summaries directly from the portal.
- Optimized frontend component rendering and state updates to ensure responsive interactions across data-dense views.

Head of App and Web Development 2022 – 2025
KHacks Coimbatore, India

- Mentored student teams for national hackathons, advising on system architectures, backend design, and frontend workflows.
- Conducted hands-on technical workshops on Docker containerization, Git version control, and web engineering for 250+ participants.
- Led student engineering teams in developing internal club attendance tracking and project submission management portals.

FLAGSHIP TECHNICAL PROJECTS

sofie | *Triton Inference Server, vLLM, Open WebUI, Docker, Graylog*

- Engineered a campus-wide generative AI platform using Open WebUI as frontend and Triton Inference Server with vLLM for high-throughput serving.
- Configured continuous batching and KV-cache memory tuning on local GPU infrastructure to minimize first-token latency across concurrent queries.
- Integrated deterministic guardrails for content moderation and configured Graylog for centralized request logging and system telemetry.

CodeTutor | *React.js, Django REST Framework, PostgreSQL, Docker*

- Built an educational lab management and learning platform designed for program verification, grading automation, and viva conduction.
- Implemented isolated Docker container execution environments to safely compile and evaluate student code submissions against test suites.
- Designed role-based access control, real-time student progress tracking analytics, and automated academic record generation.

Threat Intelligence & Dynamic Firewall System | *Python, FastAPI, React.js, Grafana*

- Developed an automated threat intelligence system combining packet capture analysis and regex blocking mechanisms for traffic filtering.
- Built an emergency asynchronous verification crawler using httpx to inspect webpage metadata in under 350ms, mitigating false positives.
- Designed real-time Grafana dashboards to monitor network traffic distributions, threat classifications, and blocked connection events.

InterviewBot (“Rachel”) | *Python, Fine-Tuned LLMs, React.js, NLP*

- Architected an AI mock interview simulator built on an open-source LLM fine-tuned for technical interview evaluation.
- Analyzed candidate resumes against target job descriptions to dynamically formulate targeted, context-aware interview questions.
- Delivered automated post-session evaluations assessing candidate communication clarity, technical depth, and response confidence.

HONORS & HACKATHON ACCOMPLISHMENTS

- **National Grand Finale Finalist – Smart India Hackathon (SIH) 2023:** Selected as national finalist among 44,000+ participating teams across India (Ministry of Education & AICTE, Gujarat Finals).
- **National Grand Finale Finalist – KAVACH 2023 Cybersecurity Hackathon:** Selected as national finalist among 3,800 teams (Ministry of Education & AICTE, Odisha Finals).
- **State Grand Finale Finalist – Tamil Nadu Police Hackathon 2023:** Selected as state finalist among 300 teams (Tamil Nadu Police Department, Chennai).
- **Event Organizer – Mindkraft 2023 (Stackmasters):** Spearheaded and executed the university technical event “Stackmasters” for over 500 participants.

EDUCATION & CERTIFICATIONS

Karunya Institute of Technology and Sciences 2021 – 2025
B.Tech in Computer Science and Engineering
Certifications: Google Foundations of Cybersecurity · Google The Path to Insights: Data Models & Pipelines · Cisco PCAP: Programming Essentials in Python
